Custom Synthesis  
Made in Germany

*who we are:*

CASID was founded as „Interest Group for Chemical Custom Synthesis in Germany“ in 2000 and became a registered society in 2009.

Custom Synthesis, the implementation and improvement of a proprietary customer method within our facilities, is a challenging segment of the fine chemical industry and requires a particularly intensive response to customer requirements.

The German custom synthesis branch has acquired an international recognition due to the high quality of its chemical expertise and the extraordinary level of understanding our customer's needs.

To further enhance this reputation, German custom synthesis companies have joined forces in the CASID. They all have individual technology platforms and their own specific know-how.

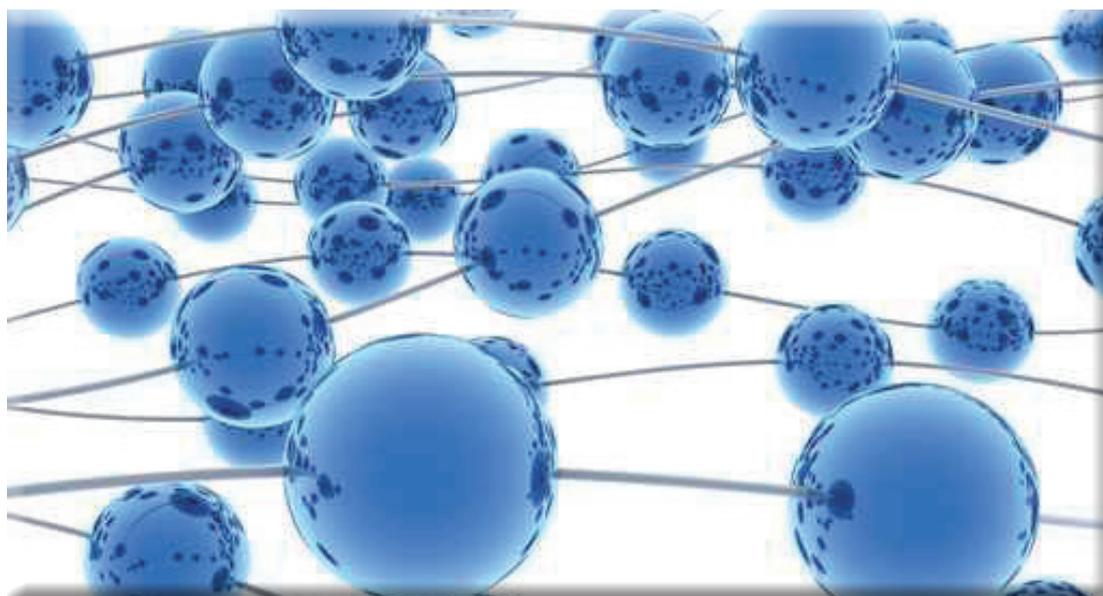

Our members include divisions of large companies alongside many independent medium-sized and smaller firms. All volume needs of products can be tailor-made to specific customer requirements, from a few milligrams for research purposes through many hundred tons of products per year.

The member companies share common interests in the CASID to improve the services they offer to their customers. CASID e.V. therefore makes an active contribution to ensure that the global customer base continues to hold Germany in high esteem as an important country for custom synthesis.

### *our network:*

Our members belong to the specialty and fine chemicals branch. They are successful market players and share a long tradition and breadth of experience together with extensive technology and analytical capabilities in the field of chemical custom synthesis.

In addition, our member companies maintain an extensive network with contacts to organisations and individuals whose experience, specialized know-how and personalities are integrated into our activities for the benefit of our customers.

### *our objectives:*

- To safeguard competitiveness by and enhancing global awareness of German custom synthesis companies
- To set up a complete service network for our customers worldwide

### *core aspects of our work include:*

- Representing shared and synergetic interests of the companies belonging to the consortium, e.g. on a German or European level
- Sharing experience, e.g. with regard to regulatory issues and dealing with the authorities
- PR activities
- Benchmarking and trend analysis
- Enhancing contacts with international organisations and associations, e.g. the ECFG (European Fine Chemicals Group) within the CEFIC
